TryHackMe Writeup: Learning Cyber Security

Field	Details
Name	Harini Edward
Intern ID	DG/15/OCT/CYBER/040
Program	DG Interns Hub, Week 1
Room	Learning Cyber Security
Room link	https://tryhackme.com/room/beginnerpathintro?utm_campaign=social_share&utm_medium=social&utm_content=share-completed-room&utm_source=copy&sharerId=698d81bc7977c1741b32e1c8
Estimated time	45 min
Status	Completed (100%)

Objective

Get a short introduction to the main areas of cyber security that the learning path will cover, from attacking systems to defending them.

What I did, task by task

Offensive security

- Saw how an attacker thinks by testing a simple fake website and finding a weakness in it.
- Offensive security means finding and exploiting weaknesses (legally) so they can be fixed.

Defensive security

- Covered how defenders protect systems and respond to attacks.
- Main areas: Security Operations Centre (monitoring and triage), threat intelligence, digital forensics and incident response, and malware analysis.

Careers in cyber security

- Looked at roles like penetration tester, red teamer, security analyst, incident responder and malware analyst.
- Helped me see which path fits me. I am leaning towards the blue team side (SOC and DFIR).

Key takeaways

- Cyber security has two sides: offence finds the weaknesses, defence detects and fixes them.
- Knowing how attackers work makes you a better defender.
- There are many career paths, and SOC is a common starting point.

Why this matters for a SOC role

This room gave me the big picture. A SOC analyst needs to know how attacks happen to recognise them in alerts and logs.
