LetsDefend Writeup

How to Investigate a SIEM Alert

DG Interns Hub - Week 3 | **Name: Harini E | Intern ID: DG/15/OCT/CYBER/040**

Platform	LetsDefend (free course)
Course	How to Investigate a SIEM Alert
Level / role	Easy, Security Analyst
Completed on	05 November 2026, 09:52 AM
Status	Completed, all 7 lessons finished and the badge earned
Badge link	https://app.letsdefend.io/my-rewards/detail/2f2d151a9e4f4b4c9baaf903d42604de

Overview

This course shows how a SOC analyst works through a SIEM alert, from the moment it appears to the final decision about it. It is about telling a false positive from a real threat and knowing what to do next. I took it because it connects directly to this week's topic: Sysmon, auditd and Snort all produce the kind of data a SIEM collects and raises alerts on.

Lessons I completed

Lesson	Focus
Introduction to SIEM Alerts	The starting point: what a SIEM alert is and why it needs to be investigated.
Detection	How the alert is first noticed and looked at.
Case Creation and Playbook Initiation	Opening a case for the alert and following the playbook for it.
Email Analysis	Checking the email side of the alert.
Network and Log Analysis	Looking at network traffic and log records related to the alert.
Endpoint Analysis	Checking the affected machine.
Result	The final lesson, ending with the questions that confirm what I learned.

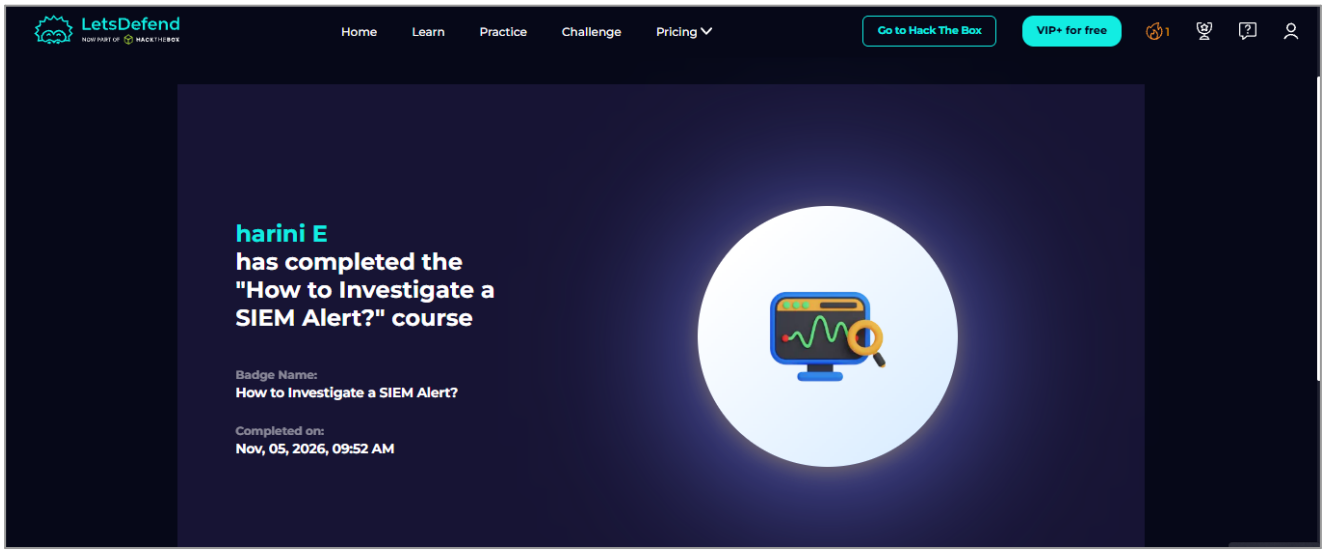

Question I answered

Question	On the monitoring page, through which channel can you access the official incident report of an alert?
My answer	Closed Alerts
Result	Correct. The progress bar for the questions shows 100%.

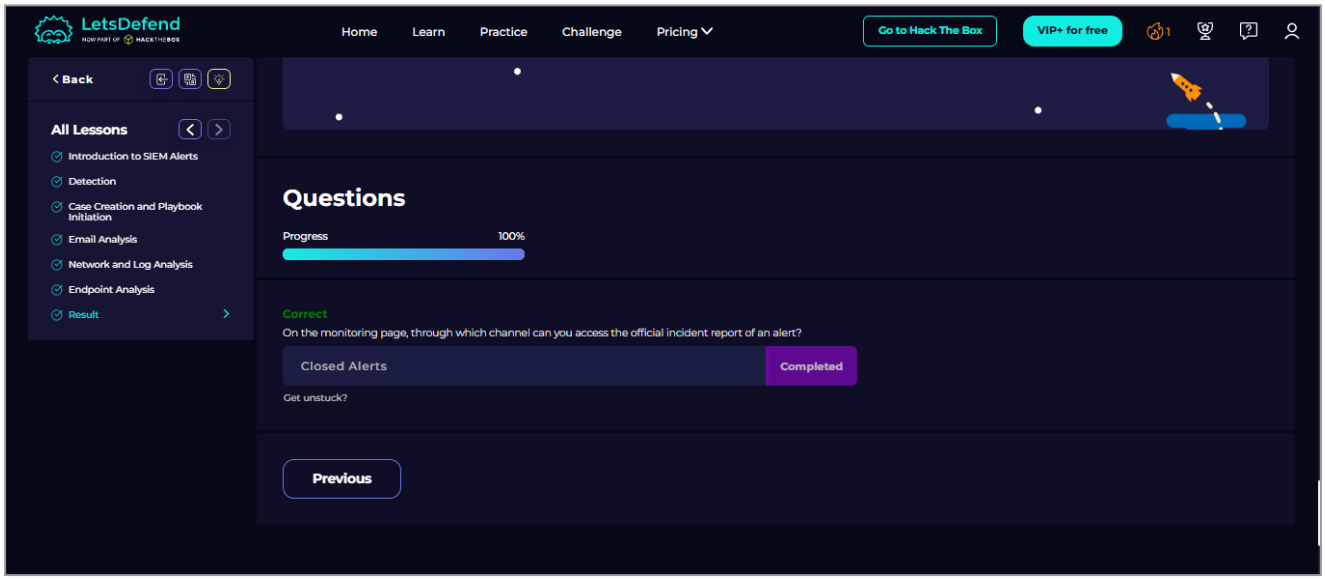

What I took from it

The course follows the order of a real investigation: detect the alert, open a case, then check the email, the network and logs, and the endpoint before reaching a result. The question I answered also taught me where the official report of an alert is kept once it has been investigated and closed, which is the Closed Alerts channel on the monitoring page. The network, log and endpoint steps relate to what I practised this week, where I looked at Sysmon events, auditd records and Snort alerts myself.

Evidence

1. Badge page showing the course completed on 05 November 2026, 09:52 AM

2. Result lesson: all 7 lessons checked, questions at 100%, my answer marked Correct
